

# Team Mediocre

By: Zi An, Yibin, Brandon

Explaining Port  
Incidents...  
with Monkes

Every day...  
hundreds of incident  
emails arrive

## Current workflow

- Manual
- Tedious
- Error prone

Monkes read each one  
...manually

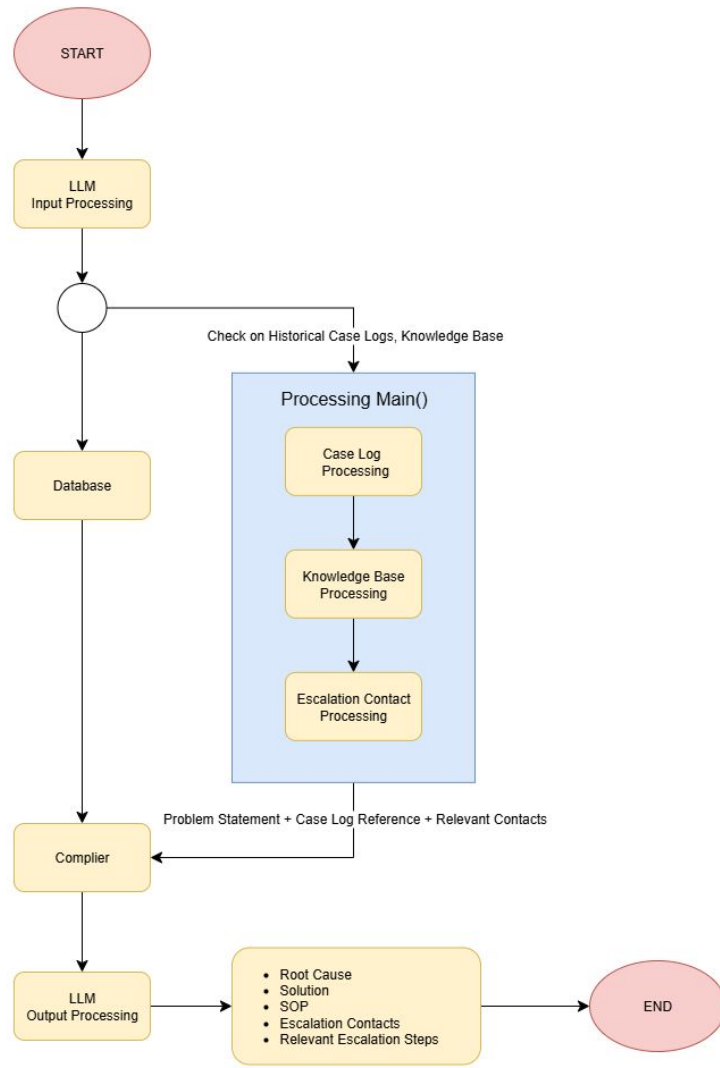

Time wasted. Delays. Mistakes

Then, we built...  
the Incident  
Processor

Time wasted. Delays. Mistakes.

# Monke's sexy UI

Incident Processor

## How can I help?

Describe any incident to receive AI-powered analysis

Describe the incident...

Press **Cmd/Ctrl** + **Enter** to submit

It reads the message...

## Historical Case Logs

### CNTR: Weight and size attributes for CONTAINER\_ID do not align with manifest data

Module	Container Booking
--------	-------------------

#### Overview

Weight and size attributes for CONTAINER\_ID do not align with manifest data. OMS lists 22G1 whereas the EDI intake translated to 45R1—slot planning at PSA Pasir Panjang misallocated. Voyage QS19; last known location Block B3. Suspect duplicate CODECO from yesterday caused field overwrite.

#### Resolution

1. Ran de-duplication on EDI queue and restored the correct CODECO snapshot.
2. Set precedence to prefer TOS for equipment attributes; added a rule to reject backdated updates within 120 minutes.
  - 2.1 Archive ACK with timestamp and execution ID.
  - 2.2 Notify partner with sanitized sample if needed.
3. Customer notified using a masked ticket reference.
4. Locate the problematic EDI message/file and quarantine it.
5. Validate structure and partner-specific rules.
  - 5.1 Run schema validator (segments/qualifiers/max-occurrence).

## Knowledge Base Logs

It checks old cases and knowledge.

## ⬆ Escalation Required

EDI/API

Contacts:

- Tom Tan ♦ EDI/API Support <tom.tan@psa123.com>

Escalation Steps:

- 1. Contact EDI/API team via on-call channel.
- 2. In case of API failures, escalate to Infra/SRE.
- 3. Engage partner if issue persists.

Then decides who  
to contact.

Boom. Escalation  
ready in seconds.

## Incident Report

Low

### Duplicate containers found

10/20/2025, 3:30:12 PM

### Recommended Resolution

Module: Container (CNTR)

#### Summary:

Alert: 'Duplicate containers found'. Automated extraction shows query=0, count=0, results=[], and DB RESULT returned no matches with error 'No matches found for extracted variables'. No owner is assigned in the DB RESULT. Recommend validating the report and escalating to Container (CNTR) if unresolved.

#### Root Cause:

unknown

#### Resolution Steps:

- Validate the original report: ORIGINAL CONTENT='Duplicate containers found'.
- Review ALERT SUMMARY (query=0, count=0, results=[]) to confirm no automated matches were found.
- Review DB RESULT (matches=[], error='No matches found for extracted variables') to confirm system lookup outcome.
- If duplicates cannot be validated or owner remains unknown, escalate to Container (CNTR) per escalation catalog steps.

#### Escalation Target: Container (CNTR)

#### Contacts:

- Mark Lee ♦ Product Ops Manager <mark.lee@psa123.com>

#### Escalation Steps:

- 1. Notify Product Duty immediately.
- 2. If unresolved, escalate to Manager on-call.
- 3. Engage SRE/Infra team if needed.

### Escalation Required

# From 15 minutes... to under 30 seconds

Thank you 🍌  
uwuw ah ah

Smarter ports.  
Happier monkes. 🐒

# Executive Summary

Our project, **Smart Triage Assistant**, was developed for **Problem Statement 3: Redefining Level 2 Product Operations** in the PSA Hackathon 2025.

It aims to **automate the incident triage process** for PSA's operations teams, transforming how incident reports (emails, SMS, API/EDI alerts) are analyzed, categorized, and escalated.

## Impact

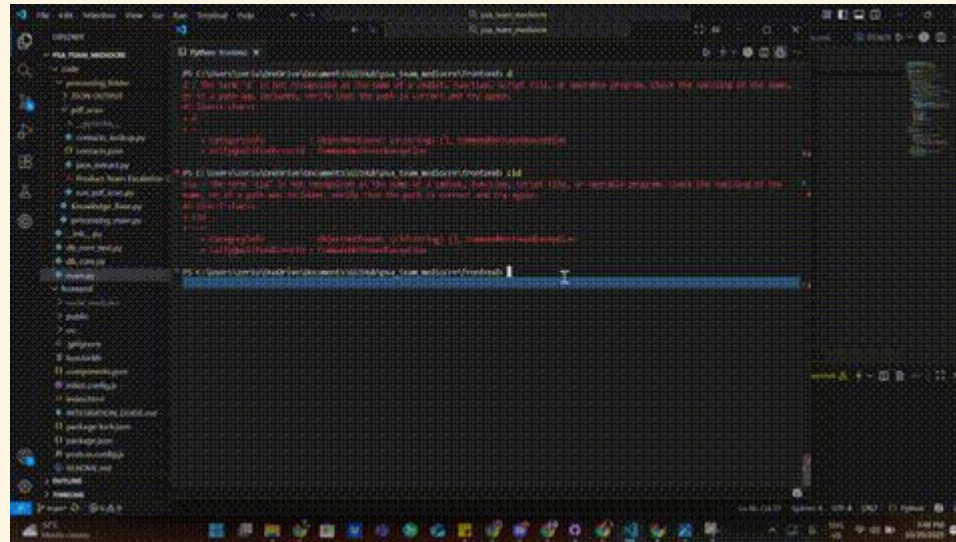

- **Reduces triage time** from ~15 minutes to **under 30 seconds**.
- **Minimizes routing errors**, ensuring the right team receives the right alert.
- **Enhances operational visibility** with structured JSON outputs and dashboards.
- **Scales across communication channels** (email, SMS, API logs).

# Technical Architecture

- **Backend:** Python (FastAPI-style architecture with modular processing pipeline)
- **Frontend:** React + Vite + Express proxy
- **Core Modules:**
  - *Email Processor* – text extraction & cleaning
  - *Excel & Docx Scanner* – embedding-based semantic match
  - *Decision Maker* – GPT-5 LLM for classification
  - *UI Connector* – displays results in real time
